

# **NADEX Weekly Binary Options System**

**What if You Could take the Selling Credit Spreads to a New Level Now Being Able to Score on 30% to 200% Returns Several Times a Week Every Week?**

Pretty funky looking eh? You'll want to [learn NADEX binary options](#) through our 101 course for sure. You can win if the blue options are above the strikes on the left or the red options are below the strikes on the left by expiration. You can also ride momentum and exit. i.e. buy at 14 and sell at 79.50. You can buy at 14.00 and YM rises above 18325 by expiration then you make 86 minus spread. So if you bought 10 contracts at 14 for \$140 you would make \$860 if YM went up and stayed over 18325 by expiration.

Now we just use this as a numerical example. You can find better risk to reward to probability combinations when discovering what the "Wall St. 30" is doing on the price charts.

Contract	Time Left	Expiry	Bid Size	Bid	Offer	Offer Size	Update	Indicative Index
