```

We take a unique angle with a well approved drawing mechanism for opportunities that coordinate exceptionally well with high velocity move so we can ride and out-of-the-money NADEX binary

option from a low price such as 15 and turn it into 30, 60, 90 or 100.

And that is a huge gain. Even if you can just expire in the money that's a 667% return. Think of it this way: if you invested \$1,000 it would turn into \$6,667 in what, 20 or 30 minutes on average on a decent momentum move in Forex or an index future.

### **CLAW6 Binary Options Strategy gives you a way to trade with lots of opportunities**

- You can create trading opportunities whatever although I'm sure you'll find your sweet spot best times to trade.
- The strategy will help you further avoid mediocre trade by giving you a high probability setup on each trade.
- The type of opportunity we trade is usually High Velocity which great for trading any sort of option particular a binary option that is soon to be expiring. That said a binary option that is soon to be expiring has very high Deltas so you need very little picks in order to make a huge score.
