20 Minute Expiration NADEX System

## **NADEX FURY 20 Minute NADEX Binary Options System**

**This is Great Dynamic Trade that  
Captures Profit But Allows Other  
Trades to Go into  
Expiration Providing Some Rather  
Dramatic Returns – \$8400 a Day  
Systems Results / 10 Contracts or  
Only \$200 Risk Per Trade. See  
Below**

**Trades 4 Hours 20 Minute Session with**

## **Some Super Systems Results Below of an \$6,800 day then a \$10,000 Day on Only 10 Contracts Risking Roughly \$200 Only Per Trade**

We look to take burst of momentum, trail the profits or let them go into expiration if the profits keep on rolling. That said we are not specifically targeting expiration. We look to do so with NADEX FURY 20 Minute NADEX Binary Options System over and over to let the momentum burst method hand us quick grabs of profit. So this way we don't need to hang around to long and are able to capture "low hanging fruit" profits.

What is this NADEX FURY 20 Minute NADEX Binary Options Scalping System?

- It's a home study course that teaches you the system. It is not software.

- This system trades 2 minute bars price action style. Yes it's different than all other systems. All of our systems are different although we've made quite a few NADEX 20 minute binary options systems lately; we just kept making new breakthrough discoveries.
- So as soon as you get your setup, hit the trigger when triggered and simply be ready to quickly take your profits with trail stop mechanism or not letting it expire for full profits.
- Over this 20 minute cycle it often goes by faster than we expect. So it's nice to take advantage of a nice price bursts of high probability.
- We trade 9:40 to 14:00 although you can trade as long or short as you want. Fluid price action times are ideal.

### Example Systems Performance

We trade a mixture of "scalp" more like trailing profits mixed with what simply just keeps going into expiration.

Here is US Smallcap 2000: The day worked out quite well trading from 9:40 to 14:00 so a total of 4 hours 20 minutes. \$840 1 contract. \$8400 10 contracts.

- We are trading the next strike out of the money from the At the money / near the money strike
- We trade momentum and look to trail stop profits
- If it goes into expiration then we let it expire. We are not specifically trading for expiration but if a trade does not trail stop out then we just take the expiration. Of course that is very nice since
- Some trades just pop into expiration a few minutes later.
- Yikes look at 8/17 41,625 on 1 contract which is roughly a \$20 risk per trade. And a ridiculous \$16,250 for 10 contracts at \$200 risk per trade. That day was pretty fluid in its price action although it wasn't that fast of a day. Fluid faster days may tend to do better.
