## **NADEX RED 20 Minute Binary Options System Scalper**

**A Most Excellent NADEX 20 Minute Binary Options System Scalper Trader for NADEX So Excellent I'm Tempted into Being Greedy and Pulling it Off the Markets so We Can Hog This All to Ourselves**

# NADEX **RED**

20 Minute Binary Options System Scalper

Yes that was a pig drawing at the end of that sentence. So on that note I know there are a lot of trader oinkers out there who would love to get their snouts into this NADEX RED 20 Minute Binary Options System Scalper. That means that if you like to rack it up and dominate in your trading then you may really like this system.

RED – It's Total Scalping. We have found that going for as sure a thing as possible which would be a 20 point gain on NADEX in our case has produced an amazing frequency.

Ok. So what's scalping? It's simply taking a momentum burst entry and then using a pretty tight trail stop method to capture any price burst the market is giving. But instead of trading FX and futures we are using NADEX instead!

So what comes out to a minuscule move on an index future ends up becoming a 100%, 200% 300% or even more return. And yes we are in and out FAST. You're going to like this system!

- 25 Wins 6 Losses – this is a great win to loss ratio, obviously. And it's the frequency that makes the money.
- Learn this method of scalping from us through our home study course that you take online. Once you get this system down you have a skill for life, and a powerful one.
- This is about quick grab profit frequency. As soon as we get our entry we usually can exit with profits right away.

- It's FUN!

## NADEX RED Performance explained:

We're scalping at 1 point on US Small cap 2000 on 20 minute NADEX binary options. Scroll to the right to see the rest... \$3800 on 10 contracts. Simple system to trade too!

Now "grabbing at 1 point" is a rough estimate thing. Once you get a nice price pop, especially on faster days you could have more than 1 point, 2, 3 points before you react for extra profit. But 1 point means what: well you can see from the screen shot below with 17 minutes out of 20 left it means 20 points of profit. But with less time left it could mean 40, 50, 60... points of profit!

US SmallCap 2000 (Dec) >1163.9 (4PM)	all	17m : 9s	19-OCT-15	-	-	3.50	25	15:40:04	1158.780
US SmallCap 2000 (Dec) >1162.9 (4PM)	all	17m : 9s	19-OCT-15	-	-	3.75	25	15:42:37	1158.780
US SmallCap 2000 (Dec) >1161.9 (4PM)	all	17m : 9s	19-OCT-15	-	-	4.75	25	15:42:50	1158.780
US SmallCap 2000 (Dec) >1160.9 (4PM)	all	17m : 9s	19-OCT-15	20	5.25	9.25	25	15:42:50	1158.780
US SmallCap 2000 (Dec) >1159.9 (4PM)	all	17m : 9s	19-OCT-15	20	18.00	21.50	25	15:42:50	1158.780
US SmallCap 2000 (Dec) >1158.9 (4PM)	all	17m : 9s	19-OCT-15	20	38.25	43.75	25	15:42:50	1158.780
US SmallCap 2000 (Dec) >1157.9 (4PM)	all	17m : 9s	19-OCT-15	25	63.50	68.25	20	15:42:50	1158.780
US SmallCap 2000 (Dec) >1156.9 (4PM)	all	17m : 9s	19-OCT-15	25	83.50	86.75	20	15:42:50	1158.780
US SmallCap 2000 (Dec) >1155.9 (4PM)	all	17m : 9s	19-OCT-15	25	92.75	97.25	20	15:42:50	1158.780
US SmallCap 2000 (Dec) >1154.9 (4PM)	all	17m : 9s	19-OCT-15	25	96.00	96.00	-	15:42:12	1158.780
US SmallCap 2000 (Dec) >1153.9 (4PM)	all	17m : 9s	19-OCT-15	25	96.25	-	-	15:42:00	1158.780
US SmallCap 2000 (Dec) >1152.9 (4PM)	all	17m : 9s	19-OCT-15	25	96.50	-	-	15:40:04	1158.780

Here is a performance sample. We are using 1 minute bars on "US Small Cap 2000". At 1 point we go grab profits. Now you can see the numbers below. But that doesn't account for some trades that will lose at first (and since we can't usually get out with much of anything on a "stop out" we leave losing positions on) but then will come back and expire ITM winning the full 100! So just one of those bonus winners will take out 4 losses granted our average buy side is around 20 (that's the target area although you may not have that all the time at your point of entry: it could be 15 or 30 for example). We use 20 for an average.

1	1	1	1	1	1	1	0	1	1	1	0	1	1	1	1	1	1	1	1	0	1	0	1	1	0	1	1	1	1	0	1	25
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	----

20	20	20	20	20	20	-20	20	20	20	-20	20	20	20	20	20	20	20	20	-20	20	-20	20	20	-20	20	20	20	20	20	20	20	380 pts or \$380 per contract.		
																																		\$3,800.00 using 10 contracts

**More on RED, understanding how the profit making and stacking process works.**

And also... as we get closer to expiration a 1 point scalp can send our position at 20, our next strike out of the money from the near the money position from 20 right away to 65 or 70 for example. So really you have to factor that in for extra profit too.

So we just took around 15 minutes out till expiration deltas on the 20 minute binary option which roughly, 20 would turn into 40 off of a 1 point move with the underlying "US Small Cap 2000" which are the Russell 2000 futures.

So here you go NADEX Scalping fans! Man what if you could do this every day! So at \$200 roughly, risk per trade here is what NADEX RED shows for profits trading only 10 puny contracts and scalping too. There is premium decay when out of the money but our trades usually only last a few minutes, I mean, it's scalping!

Remember profits are actually higher since a couple, few of the losers could have turned around and expired ITM. So if 2 losers turned around and expired ITM then you would add \$1600 in profit to the wins while reducing the loss to \$800 from \$1200. Plus as we go closer to expiration several of these 1 point scalps made 40, 50, 60 instead of 20. We did not count that either in the performance record. So don't be surprised if you end up making more money on average than you see here (although no future guarantees of success are implied etc..)

Wins	Loss	NET
25	6	
\$5000	\$-1200	\$3,800.00

\$1997
