NADEX 20 minute binaries are fairly quick but not that quick. They allow for potential great returns. That potential can be realized when timed with price chart.

But as you should know by now, one, two or a few winning trades don't necessarily keep your account growing. You need to net out winning vs. losing and where your winning revenue is greater than your losing cost.

See how our NADEX 20 System 1 captures ATM NADEX binaries for quick expiration and how we've solved the problem while looking to net netting out profit.

This is a system based on taking advantage of certain risk to reward
What if You Could Net \$1,093.75 for 2.5 Hours a Day? NADEX 20

We've developed a nice solid system for the NADEX 20 min binaries and we've focused in on the Russell 2000 futures.

It trades only 2.5 hours a day. That's nice! Now our systems results have been producing a \$1,093.75 a day average trading 9:30 open to noon.

And with NADEX binaries we can go "At The Money" or close to it to average out a 100% binary option. This allows us to better manage our costs and requires a lower winning percentage in order to net out profits.

ALSO of note: NADEX binary options are quite different vs. your "traditional" spot options type binary broker. You can trade in and out before expiration. Our at the money strike price binary option has roughly a 1 to 1 risk to reward ratio. This means you get a "100% Payout" Binary option! That's much better than the standard 70% more binary brokers offer on average.

Here are the simple systems results. Could you have made these results or something very close to it if you traded this system? Yes. Plus you don't have to watch the markets all day: we're only in the markets from 9:30 to 12 noon, 2.5 hours.

Also know that NADEX 20 minute binary options are cycling binary options means every 20 minutes they come and go. The system entry triggers may get you in with 20 minutes down to a few minutes left so you'll need a system that can trigger a high probability move away from your entry point for ATM binaries and keep moving away from your entry point in your favored direction.

Here are some sample results.

The totals to the right are where we are counting losses as complete losses although you can get out earlier with less loss. In this system we are aiming to capture the 100% payout profit by expiring in the money.

Theses results are from the Russell2000 futures:

Russell 2000 Over at NADEX (they give you good charts)

Trading 9:30 to 12 Noon for 2.5 Hours Only

15-Apr	WWWLW	\$1,500.00
16	WWLW	\$1,000.00
	LWLW	\$0.00

	LWWW	\$1,500.00	
	WLWW	\$1,000.00	
	WWWL	\$1,000.00	
	WWW	\$1,500.00	
may 1st	WWWLW	\$2,000.00	
	WWW	\$1,500.00	
	WW	\$1,000.00	
	WLWWW	\$1,500.00	
	LWWWW	\$1,500.00	
	WL	\$0.00	
	WWL	\$500.00	
	WLW	\$500.00	
14-May	WWW	\$1,500.00	
		\$17,500.00	
		\$1,093.75	A Day Average

I would say these results, if you traded during those dates along with the simplified system entries, could have been very replicatable. This means that this system is very tradeable.

And just for a reminder in case you did not know about NADEX:

1. You can enter and exit NADEX binaries. So you can take profit early if you want or cut a

loss to even as little as 10% (where as most binary options brokers of the other style offer you only 90% to 100% loss)

2. You can also trade NADEX binary options to expirations
3. These binaries we use for this system are "ATM" binaries or at the money, where we get roughly a 100% binary meaning a 1:1 reward to risk ratio, meaning that if we win we make 100% return not only 70% like other brokers
4. Order fills are fast!
5. Make as much profit as you want without worry - NADEX is a fully legal USA exchange!
