

“QWARG - ULTRA Binary Options System Powerful Results on AAPL is Super Easy to Trade with a Short Learning Curve and Powerful Systems Results...”

This system is indicator based and is fairly easy to trade. It uses the 30 minute binary period. It focuses on AAPL, although the system has a high probability of working in a similar fashion on other fluid price moving instruments (although we've focused on AAPL).

The system is a video home study course (not software or a platform). The course teaches you how to trade QWARG.

Example Track Record:

The track record is based on \$500 per trade with 70% as a win amount and 90% as a loss amount with 30 min (:00 and :30) binary options. You should be able to trade it with any binary options broker.

At this point you can purchase the system directly or you can get it for free through our binary options funding program where they pay us for your system. If you're ready to up your game - get this system while you can. We plan on selling a limited number of copies at the moment (maybe 25 globally). The direct sale price is \$9,997k currently or the 2 pay option. (which as you can see below as the potential to be made back in a couple few days, position size dependent, according to the daily systems average - not a promise but a potential - when you trade the system correctly at \$500/trade (and when you're really good at it why wouldn't you take this up to \$2,500 a trade or more when your account size can support it).FAQ

1. The system trades 30 min binary options on AAPL - stock binary options
 2. You should be able to use this on any broker that allows 30 minute binary options (which is most as of this typing)
 3. It's not software. It's not a plugin. It's not an EA. It's not a platform. It's a home study video course that teaches you how to trade the QWARG binary options system entry rules.
 4. It's scalable with the money management system. Your trading account size will dictate your position size. You can get started with a few hundred bucks just adjust your position size accordingly. Infact everyone should start out with \$10 trades just to get used to trading the system with real money.
 5. Learning time: 2 to 3 hours. You should be able to pickup trading this system well within a few days of applied efforts. Use your will power to trade correctly until trading QWARG correctly becomes a habit.
 6. "How much can I make?" well you'll find out shortly after learning and trading the system well - you'll find out the potential. Understand that the track record uses only \$500 per trade based on a 70% profit and 90% loss. And for example, if you were using \$2,500 positions and your results were just like the system performance track record then your results could potentially be 5 times as much. We guarantee nothing regarding your performance although we believe the potential when trading the system well is very good, in our opinion.
