Let Me Show You Quickly What NADEX Scalping is All About So You Can Understand and then Advance to Consistent Cash Flow Grabbing

As you can see on the Russell 2000 below only a 2.8 point little swing and price that is simply a bread and butter swing on one minute bars on your average day on these us small-cap 2000 Russell 2000 e-mini futures, with even one hour to go can take $230 and turn it into $460 on just a few minutes of a move. But there are better examples than this or the Deltas are even higher. And as time ticks down, that $230 you could turn into $660 on the same move. As time whittles down further that $230 could turn into $860 on the same 2.8 price move.

So do understand that the Deltas increase on the options payout as you get closer and closer towards expiration. And because we are playing little swing news we aren't really very concerned with premium decay.

# And look here on the

NADEX

5 minute expirations with 3 minutes left 2 expiration: We can play a price pop, have the profits and exit the trade.

With traditional binaries you cannot exit the trade & you have to wait till expiration. You can wait to expiration here at NADEX as well but price action could reverse upon you into expiration.

With the NADEX 5 minute binary options, when you get a price pop, an intraday little price swing, is not a bad idea to just take the profits right away. Would that be? Because price action is going to follow its own Cycles, price action in the underlying Forex pair doesn't care about your 5 minute expiration on your binary option. So therefore take the move then Take the Money and Run. Do this over and over and over

again.

So in other words you may want to wait for strategic types of setups in order to time your high probability price pop or strong swing move and trade those trades only. We have several NADEX binary options strategies that you can use on the 5-minute binary. So in short with the 5-minute binary when you get the price action you can enter and exit with a nice juicy profit. Also waiting for your choice swing trading setups will put you in a position to trade other Methods at the same time. So keep that in mind.

Contract				Time Left	Expiry	Bid Size	Bid	Offer	Offer Size	Update	Indicative Price
EUR/USD >1.0407 (3:10PM)				3m : 8s	19-DEC-16	30	28.50	41.50	10	15:06:49	1.04056
EUR/USD >1.0405 (3:10PM)				3m : 8s	19-DEC-16	10	61.00	69.25	10	15:06:49	1.04056
EUR/USD >1.0403 (3:10PM)				3m : 8s	19-DEC-16	10	82.50	90.50	10	15:06:49	1.04056
EUR/USD >1.0401 (3:10PM)				3m : 8s	19-DEC-16	10	92.00	-		15:06:48	1.04056
EUR/USD >1.0399 (3:10PM)				3m : 8s	19-DEC-16	10	92.00	-		15:06:32	1.04056

Then you have the NADEX 20 minute binary options expiration. These expirations provide tremendous scalping opportunities once you know how to scalp correctly.

The 20 minutes time cycle tends to go by pretty smoothly while allowing for several mini swing movements to occur. As you can see here the stripes are on the point 7 in distance although that will vary according to the time of day as NADEX defines it. But a nice little easy 2.1 point pop can take a position at $390 internet $710. Make a giving you the ability to adjust it. And of course it takes less and less Point move to make a very large return as the expiration approaches and Delta's increase.

You certainly can't get 50% to 300% returns over and over writing simple bread and butter intraday swings by trading stocks or even Forex but you can with NADEX .
