

Can You Make More Money With NADEX Spreads Or NADEX Binary Options?

NADEX spreads offer certain opportunities and binaries on NADEX offer different opportunities. So what's the difference? Well NADEX spreads you can play momentum and you get whatever you keep. That's not necessarily the case with binary options whereas binary options could not make it in the money and then you make no money and you lose what you put it.

On the other hand when you play binary options out of money you can make very large returns usually bigger than spreads and not always. You can even make 700% to 1000% returns on NADEX spreads which is pretty awesome if you think about it. But you need that momentum.

With binary options we can make a 100% 200% return with just a little bit of momentum which is cool.

You can trade the NADEX weekly spreads which are called touch brackets or you can play the daily or the two-hour spreads for momentum. The two-hour spreads give you more control over your risk. That said you can have just as much control with a lot more profit potential with the play at the edge of the test brackets for the daily spreads.

So why did NADEX call a spread a spread? Well it's kind of like trading the underlying asset but it's in a bracket which reminds individual of the concept of a credit spread or a debit spread in vanilla options. So it's really about the bracketed range and that's really about it. There are some premium decay issues but not much. There are some premium puff issues let's say on the NASDAQ US Tech 100 but other spreads don't have to premium puff which gives you

very good deltas.

You would be smart to learn about spreads because it can put a powerful trading weapon in your arsenal. Sometimes market conditions do better for spreads than the binaries. [Check out more information here on our spreads NADEX trading strategies systems and coaching programs.](#)
